

INTERNSHIP REPORT

A REPORT ABOUT KERALA'S SEVENTH STATE FINANCE COMMISSION

Internship report submitted to the University of Madras in partial fulfilment of the requirement for award of the degree of MASTER OF ARTS IN ECONOMICS

SUBMITTED BY
CAROL SHEKINAH P
(Reg. No: 31424006)

UNDER THE GUIDANCE AND SUPPORT OF
Dr. K. MALATHI,
ASSISTANT PROFESSOR,
DEPARTMENT OF ECONOMICS,
UNIVERSITY OF MADRAS,
CHEPAUK, CHENNAI – 600005,
YEAR -202

Dr. K. MALATHI

Assistant Professor,

Department of Economics,

University of Madras,

Chennai – 600005.

DECLARATION

I Hereby declare that the project report on " KERALA'S SEVENTH STATE FINANCE COMMISSION," completed by CAROL SHEKINAH P (31424006) is an original work carried out under my supervision. It emphasizes that this project has not been submitted to the University of Madras or any other institution for academic credit. This ensures the work's uniqueness and compliance with the requirements for the M.A. Economics degree, validating its authenticity for academic purposes.

Place: Chennai

Date:

Signature of the Guide

(Dr.K. MALATHI)

Dr. K. MALATHI

Assistant Professor,

Department of Economics,

University of madras,

Chennai – 600005.

CERTIFICATE

This is to certify that CAROL SHEKINAH P (DEPARTMENT OF ECONOMICS) has undergone her Internship in “ KERALA’S SEVENTH STATE FINANCE COMMISSION” for a period of 30 days from 23rd June to 23rd July 2025, submitted in partial fulfilment of the requirement for the degree of Master of Arts in Economics is a Bonafide record of work done under my guidance and supervision and it do not contain similar work submitted to the Madras University or any other institution for the partial fulfilment of requirement for the award of Post Graduate degree in M.A. Economics.

Place: Chennai

Date:

ACKNOWLEDGEMENT

I am deeply grateful to the ***Kerala's Seventh State Finance Commission*** and everyone who supported me throughout my internship, making this journey both enriching and transformative.

I am thankful to the Head of the Department, ***Dr. S. Chinnammai, Professor and Head of the Department of Economics***, For her consent and support during the internship period.

I am especially indebted to my internship guide, ***Dr. K. Malathi, Assistant Professor of the Department of Economics***, for her exceptional mentorship, insightful guidance, and constant encouragement. Her expertise and support were invaluable in shaping my learning experience.

My sincere appreciation also goes to ***Dr. Hari Kurup, Dr. Nirmal Roy, Dr. Bijni***, at Kerala's Seventh State Finance Commission for their generous mentorship and practical insights. Their commitment to excellence and guidance provided me with a unique perspective that has enriched my skills and knowledge in the field.

I would also like to recognize my talented peer team at Kerala's Seventh State Finance Commission, whose collaboration, shared knowledge, and camaraderie added tremendous value to this journey. Their support fostered a vibrant learning environment, making this experience all the more memorable.

To everyone at Kerala's Seventh State Finance Commission and beyond who contributed to making this internship a truly impactful experience, thank you for your invaluable support, inspiration, and encouragement. This opportunity has been a milestone in my professional growth, and I am forever grateful

INTERNSHIP CERTIFICATE ISSUED BY KERALA'S SEVENTH STATE
FINANCE COMMISSION

**SEVENTH STATE FINANCE COMMISSION,
GOVERNMENT OF KERALA**

Treasury Directorate Building
Pattom Palace PO,
Thiruvananthapuram
Kerala, 695004

23rd July 2025

No: 3120835/7SFCA3/6/2025- FIN

TO WHOMSOEVER IT MAY CONCERN

This is to certify that **Ms Carol Shekinah.P** has successfully completed a one-month internship (23rd June 2025 – 23rd July 2025) with the Seventh State Finance Commission(SFC) under the Government of Kerala. During this time, she applied analytical skills in fiscal research, data cleaning, and policy simulation, supported by an economic understanding relevant to Kerala's local governing bodies.

The SFC's are constituted by the Government of Kerala under clause 1 of Article 243 (I) and (Y) of the Constitution of India read with sections 186 of the Kerala Panchayat Raj Act 1994 and Section 205 of the Kerala Municipalities Act 1994. The commission studies the financial position of the Panchayats and the Urban Local Bodies to make recommendations on financial devolution and governance issues to the Governor.

We appreciate her work at the commission and wish them all success in their future career.

Prof K N Harilal
Chairman

1.Internship Introduction

My One month-long internship with the Kerala State Finance Commission (KSFC) was between 23 June to 23 July 2025. The main aim of this internship was to experience firsthand the public finance and decentralized administration through helping the KSFC secretariat in budget analysis for local self-government. KSFC (statutory organization under the Kerala Finance Department) is required to analyze the financial status of municipalities and panchayats and suggest the steps for enhanced fiscal management of their finances. As a practical measure, the KSFC suggests to the state government how the revenues from taxes and grants are to be distributed between the State and local authorities as per the Constitution's 73rd and 74th Amendments.

The KSFC derives its authority from Article 243(I) and (Y) of the Indian Constitution and Kerala's Panchayat Raj and Municipal Acts. Its core objectives include: recommending how state tax proceeds should be distributed to rural and urban local governments, suggesting measures to strengthen local bodies, and ensuring fiscal responsibility at the local level. For example, its mandate is to “review the financial position of the Panchayats and the Urban Local Bodies to make recommendations” to improve their financial management and efficiency. In practice, this means analyzing local government revenues and expenditures, and advising on formula-based transfers and grants to ensure that Panchayats and Municipalities can carry out their assigned functions effectively.

Key objectives of KSFC (as per constitutional mandate):

Recommend the principles for distribution of state tax revenues to Panchayats.

Recommend the principles for distribution of state tax revenues to Urban Local Bodies.

Suggest measures to strengthen local self-governments (both rural and urban).

Monitor and report on the implementation of its recommendations in the State Assembly.

2. Understanding the Kerala Context

Kerala boasts a highly devolved local government system. The state is home to more than 1,200 elected local governments in rural and urban levels. To be specific, Kerala's three-tier Panchayati Raj in rural local government includes 941 Gram Panchayats (village councils), 152 Block Panchayats, and 14 District Panchayats. Urban local government is made up of 87 Municipalities and 6 Municipal Corporations. These figures (941, 152, 14, 87, and 6) indicate the state's widespread network of grassroots institutions. Every level has representatives elected to administer at the local level.

In Kerala, the role and powers of these organizations are well defined. Following the 73rd and 74th Constitutional Amendments, the State put the local functions in schedules to the Kerala Panchayat Raj Act and Municipal Act. For example, a Kerala Gram Panchayat has 27 compulsory functions as specified in law. These include routine civic activities like management of waste, street lighting, public health, and control of markets (the precise list of 27 items is specified in Schedule III to the Kerala Panchayat Raj Act). (For comparison, Kerala's municipalities and corporations have 30 obligatory functions each, which correspond to their wider urban roles.) Statutory functions place fiscal decentralization at the core of the system: local governments are Constitutionally mandated to carry out some tasks, and consequently need stable sources of revenue and transfers to enable them to do so.

2.1 How Local Self-Government Works in Kerala

One of the main themes of my internship was learning about fiscal federalism – how funds move from state (and central) governments down to local governments. Kerala is significant for the extent of its devolution. From 1997–98, some 25% of Kerala's investible resources have been passed on to local governments in the form of a Development Fund for local plans. Moreover, the state government provides a certain percentage of its own tax collections as recurring grants: roughly 3.5% of the state's own tax collection is directed into a General Purpose Fund (GPF) for non-plan, day-to-day local activities, and 5.5% into a Maintenance Fund (mainly for roads and other assets). Local governments are free to utilize these funds within overall guidelines. (In practice, Dr. Hari Kurup taught us that Kerala often uses a 4% rule for GPF and specific budget outlays like ₹2,500 crore for road maintenance. These formulaic rules reduce discretion and promote transparency in funding local functions.)

Fiscal support to local governments is further categorized to ensure equity and special needs. The budget of the state allocates distinct amounts towards Scheduled Caste and Scheduled Tribe Sub-Plans (SSP/TSP) to cater to social inclusion. Central Finance Commission grants (CFC) also go to Kerala's local governments as a part of the federal transfers. There are also tied grants for specific sectors (education, health, etc.) and special grants for performance or initiatives. Notably, Kerala's SFC came out with a performance-linked incentive: for instance, a 10% bonus grant to local bodies for enhancing the efficiency of tax collection. This makes fiscal transfers contingent on administrative performance.

Even with the state's general dedication, money distribution within the local system is lopsided by design. Kerala gives rural administration top priority: traditionally, approximately 77% of devolved funds were allocated to rural Panchayats, approximately 13% to municipalities, and approximately 9% to corporations. This bias is a manifestation of Kerala's development strategy and the sheer volume of rural bodies. It was enlightening to observe the manner in which budget figures are converted into thousands of grassroots decisions: the state government actually channels much of its resources into enabling Gram Panchayats to implement their legislated 27 functions.

2.2 What I Learned from the Orientation

A highlight of the internship was an orientation session conducted by Dr. Hari Kurup (Advisor to the 7th State Finance Commission of Kerala). He gave a structure relating the above facts into a coherent scenario of fiscal federalism in action. The session started with India's institutional framework: the way the Constitution allocates responsibilities among the Union, States, and local governments. Dr. Kurup defined important jargon like Net Own-Source Tax Revenue (NOSTR) – effectively the overall tax collections of the state excluding collection expenses of the revenue department – and General Purpose Fund (GPF) as the portion of NOSTR that goes to local bodies towards functional purposes. These are terms that were abstract to me at first, but they were understandable in context: for instance, if Kerala's tax administration takes in ₹100, the collection cost (salaries, etc.) is subtracted to give NOSTR, and 4% of that (if employing the SFC rule) goes to the GPF.

Dr. Kurup also pointed us towards key reference documents. He suggested readings from the 5th Central Finance Commission report and Kerala's 6th State Finance Commission report for background. We were familiarized with Appendix 4 of the KSFC's data annexure, which presents key statistics on local revenues and expenditures. This provided me with a real feel of the data sources utilized in SFC analysis.

The session explained Kerala's local bodies thoroughly. I got to know (and verified) the precise figures: 6 Corporations, 87 Municipalities, 14 District Panchayats, 157 Block Panchayats, and approximately 941 Gram Panchayats. Dr. Kurup also pointed out that Kerala's Gram Panchayats have 27 statutory functions, showing the extent of grassroots responsibilities. He drew a parallel with fiscal decentralization post the 73rd Amendment: constitutional status was granted to local bodies and their functions were legalised. In Kerala's model, budgetary powers are transferred by the state government to correspond with these functions, indicating a tight coupling of "functions, functionaries, and funds."

There were a few specific fiscal observations made during the session:

Sources of revenue: We considered Kerala's local levies. Property tax is a significant own-source revenue for local authorities. Entertainment tax is also substantial (Kerala law prescribes 15–30% cesses by local authorities, with extra cesses by the state). Local

authorities also receive small fees such as professional tax and building tax. Own-source revenues, however, are modest; therefore, transfers from the state budget are essential.

State transfers: We discussed how Kerala distributes its tax revenues between local bodies. Constitutionally, the SFC proposes how the net state tax (such as sales tax, excise, stamp duties) is to be distributed to Panchayats and Municipalities. In actuality, Kerala adheres to the SFC formulas: i.e., the Development Fund is generally fixed at about 28–30% of the state budgeted Plan size (corresponding roughly to the proposed 25% or more). Road Maintenance Fund is a big lump sum (approximately ₹2,500 crore in recent times) for rural roads, and 25% of NOSTR is allocated for maintenance of non-road assets (buildings, water supply, etc.).

Calculations of funds: Dr. Kurup explained the calculations to us. We rehearsed calculating NOSTR (Total Tax Revenue less Revenue Dept. Expenditure), and then calculating the GPF (4% of NOSTR under Kerala's scheme) and Maintenance Fund. We understood how an allotment of a Gram Panchayat is finally a share of these state-level totals, distributed according to formula.

Fund categorization: We understood the various "buckets" of funding. Kerala's local government grants comprise a General Fund (untied grants for general use), Scheduled Caste Sub-Plan (SSP) and Tribal Sub-Plan (TSP) funds (for community development), Central Finance Commission (CFC) grants, Tied Grants (for areas such as health and education), and Special Grants (usually one-time or performance-based). This categorization balances wide-based support with specific interventions.

Performance and equity: We talked about the introduction of performance grants by the SFC – for example, a 10% premium for local bodies achieving over-tax collection targets – as incentive to efficiency. While so doing, Kerala has some measure of equity: for example, formulas for allocating funds take population size and road length into account so that the share of each local body is proportional to its needs and ability.

Pattern of allocation: Dr. Kurup pointed out Kerala's priorities in allocation: traditionally, roughly 77% of local finance transfers are to rural authorities, 13% to municipalities, and 9% to corporations. This bias follows both the 2007 (and existing) distribution formula and Kerala's broader focus on rural development.

Dr. Kurup wound up the session with a very brief overview of decentralization: "Functions, Functionaries, and Funds." Essentially that implies: local bodies need well-defined functions to discharge; they need to have the personnel and institutional organization (functionaries) to implement those functions; and they need sufficient funds to get the work done. This trinity encapsulated for me the reality of fiscal federalism on the ground.

2.3 Reflections on Overall Learning

The orientation and subsequent work at KSFC transformed my abstract understanding of fiscal federalism into concrete knowledge. Prior to this, I knew of the 73rd Amendment and local bodies, but I hadn't appreciated the mechanisms by which a state actually funds thousands of local councils. Seeing the formulas and numbers behind Kerala's devolution policy gave me real insight. For example, when I later calculated an actual Gram Panchayat's share of the GPF, I could trace it back to the state's NOSTR and the 4% rule – a clear line from state budget to village bank account.

Learning about the 27 mandatory functions also reshaped my perspective: I realized that decentralization in Kerala is not just rhetorical; local bodies must genuinely manage public health, schooling, roads, etc. Thus, it makes sense that a significant portion (nearly 28–30%) of Kerala's budget is earmarked for local development plans. In comparison, in many other states this share is much lower, so I see why Kerala is often cited as a model of deep devolution.

The internship work – such as reviewing local budgets and preparing budget briefs – reinforced these lessons. When analyzing a Panchayat's accounts, I could immediately identify which revenues were own-source and which were state transfers, and how each component related to the rules I had learned. The SFC's function in monitoring financial efficiency also became clear: for example, by tracking whether local bodies had received their due development funds or whether they met the conditions for performance grants. This empirical grounding has given me a nuanced understanding of fiscal federalism as not just constitutional theory, but as a system of specific allocations, formulas, and incentives in practice.

In summary, the internship's introduction phase – combining theoretical orientation with real data – greatly enhanced my grasp of local government finance in Kerala. The leadership of Dr. Hari Kurup and the KSFC team helped me appreciate how fiscal decentralization works step by step: from constitutional mandate to commission report to actual rupees flowing into a Panchayat's bank account. This solid foundation will guide the rest of my report and my future work in public finance and governance.

3. Core Work Undertaken

3.1 Data Cleaning (with data from Sanakya Website)

The first major task involved working with data sourced from the Sanakya website, which provided information on fund allocations to Local Bodies for the year 2021–22. The raw data obtained was unstructured and required extensive cleaning and formatting to make it usable for analysis.

The data was originally available in a semi-structured format, with fund details categorized by district, panchayat, and type of allocation. We were provided with Excel templates to standardize the cleaned data. These templates included specific columns for district name, panchayat name, grant type, fund amount, and remarks.

The cleaning methodology involved removing inconsistencies, such as merged cells, spelling variations, and redundant entries. Special attention was given to accurately categorizing funds under the correct headings, such as General Sector, Scheduled Caste Sub-Plan (SCSP), and Scheduled Tribe Sub-Plan (TSP). These categorizations were critical for policy recommendations and analysis by the Commission.

One of the key challenges in this process was the language inconsistency. Some of the panchayat or district names appeared in Malayalam or were formatted improperly, leading to difficulties in uniform categorization. This required manual cross-checking and corrections using reference lists and official district codes. The experience significantly enhanced my skills in Excel, data validation, and structured documentation.

3.2 Data Structuring (with data from ILGMS Portal)

The second task was based on data extracted from the ILGMS (Intelligent Local Governance Management System) Portal, which also focused on 2021–22 fund allocations. Unlike the Sanakya dataset, the ILGMS data had a more complex layout and required transposition of rows and columns for proper analysis.

The original structure of the ILGMS dataset had fund categories as column headers and panchayat names as row headers, which made it difficult to align with the templates used by the Commission. Our task was to transpose the data such that each row represented a unique fund allocation entry for a panchayat, with consistent columns across entries.

To automate this process and avoid manual errors, we were introduced to R programming, particularly for data transposition and cleaning. Under guidance, we learned basic R scripting, wrote code to identify key columns, and executed scripts that transformed the raw ILGMS data into the required structured format.

This task not only helped us understand data transformation but also improved our ability to work with open-source statistical tools, while emphasizing the importance of team coordination. Each member focused on a specific district or fund category, and the cleaned outputs were later merged for consistency.

3.3 Extracting Traditional Fund Data (Kerala Appendix 4)

The third key task involved extracting and organizing Traditional Fund data from the Kerala Appendix 4 document, which is available as part of government reports (searchable online). The document listed fund allocations across various districts in PDF format for the year 2021–22.

We had to locate the Traditional Fund section within this Appendix and extract only two essential columns: the District Name and the corresponding Traditional Fund amount. Since the PDF included multiple tables and rows, PDF to Excel conversion tools were used to isolate the relevant data.

One of the main difficulties was that the district names in the document were written in Malayalam, which required us to map them to their English equivalents. For this, we used official lists and previous datasets for verification.

To maintain uniformity across datasets, we applied district codes—a method we had used in earlier tasks. These codes helped link this data with the rest of the structured datasets in the project and ensured smooth merging and analysis.

This task not only refined our data extraction and conversion skills, but also taught us how to work with government documents in regional languages, understand local data presentation styles, and ensure alignment with standardized formats.

4. Academic and Skill-Based Activities

4.1 Parliamentary Debate on “Million Pillar Economy”

Overview and Structure of the Debate: I was involved in a simulated parliamentary-type debate on the "Million Pillar Economy" (MPE), an approach with a focus on MSME-driven inclusive growth. The exercise took the form of a house of parliament, where one team put forward government policies and an opposition team offering criticism. I belonged to the opposition team, headed by the Opposition Leader (Madhav Jay), whose agenda was to oppose assumptions and supposed results of the MPE. In preparation, every member was tasked with a theme to study and argue against.

Major Themes and Arguments Presented: The opposition had raised some questions regarding the viability of the MPE and its inclusiveness.

Key themes were:

Capital Formation and Economic Growth: We argued that without new sources of capital and credit, many MSMEs would struggle to grow. Most small enterprises barely break even and lack access to formal finance, so schemes like MPE might not significantly boost investment. As one report notes, Indian MSMEs already account for nearly half of manufacturing output. Critics argued that intense concentration on MSMEs would "crowd out" finance for high-tech or capital-intensive industries, halting aggregate GDP growth.

Digital Divide and Awareness: The team emphasized that sizable sections of the population are denied exposure to the digital instruments at the heart of the MPE. Most rural and informal firms do not know about efforts such as online commerce networks (OCEN, ONDC) or have no secure Internet connection, so benefits would be inequitably dispersed. We emphasized the requirement for widespread training, localized outreach in the vernacular, and on-the-ground implementation (through trade associations or common service centers) to prevent further urban–rural disparities.

Environmental Sustainability: A serious criticism was that uncontrolled MSME growth would impose drastic ecological prices. Opposition speakers quoted industry figures indicating that MSMEs, although accounting for ~45% of manufacturing output, create about 70% of industrial pollution. This suggests outmoded technology and poor regulation in the sector. We cautioned that without robust green protections (such as real-time monitoring and ecological zoning), the MPE would drive air and water pollution, putting health and long-term growth at risk.

Job Quality and Social Inclusion: Lastly, we highlighted that job creation through MPE could be in the form of insecure, informal work. We pointed out that the bulk of India's workers are in informal employment with no social security or legal contracts. Critics

cautioned that initiatives that target only "quantity" of jobs (e.g. microenterprise promotion) run the risk of leaving tens of millions stuck in low-paid, insecure employment. Opposition maintained that genuine economic growth needs concomitant reforms in labor rights, skill development, and the participation of women and marginalized communities (consider, for instance, that a majority of MSMEs are headed by men only).

My Contribution to the Opposition Team: As an opposition member, I was tasked with the subject "Growing Informal Sector of Employment." I contended that mere enumeration of MSME units does not provide assurances of quality employment or economic security for workers. I brought forth data (from labour surveys and government reports) to show that about four-fifths of India's workforce is in the informal sector, exposed to shocks and with no benefits. My talks emphasized the ways in which previous crises (e.g. GST, COVID-19) revealed the weakness of informal MSME employment. I recommended that without formalization and social protection, initiatives such as MPE would "trap" entrepreneurs in low-productivity employment. I also suggested supporting reforms – like expanding provident funds or health coverage to workers in MSMEs – to guarantee new employment opportunities are decent and sustainable.

4.2 Group Discussions on Fiscal Federalism

Issues of 5th and 6th State Finance Commissions: In another set of meetings, we discussed the recommendations of the 5th and 6th State Finance Commissions (SFCs) of Kerala, which pertain to state–local fiscal relationships.

The issues included the way local authorities get grants and population/tax share at the level of area, income distance and performance criteria. It was again emphasized that biennial SFC reports are essential in order to ensure fiscal balance: for instance, the RBI underlines that "a State-level rule-based system of compensation and transfers, including the regular setting up of State Finance Commissions" is vital for sound municipal finances. Operationally, the 5th and 6th SFCs had suggested formula-based grants to panchayats and municipalities, along with schemes such as relief from debt for underperforming bodies. We observed that these Commissions sought to increase local financial independence while providing accountability and equity amongst regions.

My Assigned Topic and Key Takeaways: My assigned topic was "**Vertical Sharing Criteria between the Centre and States.**" Referring to Article 280 of the Constitution, I discussed how every five years the Finance Commission suggests what percentage of central taxes will be transferred to the states. Major issues were the vertical fiscal imbalance (Centre's large tax base versus States' spending obligations) and parameters determining the sharing formula. I addressed aspects like states' spending requirements, comparative revenue-raising potential, sustainability of debt and Centre's own expenses (e.g. defense, CS schemes). We saw that GDP and inflation trends along with state government consultations influence the suggestion. Historical instances were mentioned: the 13th FC had pegged the share of the states at around 32%, the 14th at 42%, and the 15th at 41% (following Jammu &

Kashmir's reorganization). The session highlighted how these general fiscal principles try to balance national and regional objectives.

Insights from Peer Presentations: My peers gave presentations on related issues (like the 15th CFC's certain grants, fiscal decentralization designs, and GST revenue pooling). Collectively we discussed real-world challenges, like reconciling incentives for fiscal responsibility with requirements for balanced transfers. Another repeated insight was the value of transparent formulas and stable timetables: for instance, similar to the Finance Commission, SFCs apply open criteria so that local governments can predictably plan their budgets. Reforms were also something we debated – some peers proposed building up municipal property tax systems, or allowing greater borrowing at the local level – ideas which are complementary to our state-level vertical sharing. The interactions highlighted that cooperative federalism needs not only constitutional standards but ongoing conversation among all levels of government.

4.3 Preparing an Independent Research Paper

Title and Abstract: I authored a paper titled “**Unlocking New Revenue Streams for Chennai: A Proof-of-Concept Study on Innovative Urban Finance Strategies**” as part of the internship. The study addresses Chennai’s chronic infrastructure funding gap by exploring non-traditional municipal revenue tools drawn from global practice. The abstract summarized that Chennai relies heavily on a narrow tax base and state transfers, which is inadequate for growing needs. It explained that we evaluated options like congestion pricing, land-value capture, municipal green bonds, asset monetization (e.g. advertising rights), and civic crowdfunding. For each idea, we reviewed literature and modeled pilot implementations in city zones (e.g. a toll lane on Anna Salai, or premium floor-area ratios near metro stations). Key findings included large potential yields – for instance, even a modest congestion toll could raise on the order of a few hundred crores per year on busy corridors, and land-value-capture around new transit lines could generate hundreds of crores in revenue. We noted constraints (political acceptability, institutional capacity, equity concerns), but overall showed that combined fiscal innovations could vastly exceed Chennai’s incremental conventional revenues.

Methodology and Key Findings: The study used a mixed-methods approach. We began with a literature and policy review of urban finance reports (e.g. RBI, CEEW) and case studies from cities like London (congestion charging), Stockholm (road pricing), Hong Kong (rail+real estate), and Indian metros (naming rights, green bonds). We conducted a comparative case analysis of successful pilots (e.g. Indore’s ₹720 Cr green bond issue, Pimpri-Chinchwad’s climate bonds) to gauge feasibility. Next, we performed a Chennai zoning assessment, identifying high-potential corridors (Anna Salai/T. Nagar, OMR, Chennai CBD, coastal areas) for each tool. We then modeled pilot scenarios: for example, estimating peak vehicle counts on Anna Salai and projecting toll revenues under different rates. No new

surveys were done; instead we used secondary data (traffic volumes, land prices) and expert interviews for assumptions.

Key findings included:

Congestion Pricing and Parking Fees: Charging drivers for peak use (e.g. a variable toll on Anna Salai) could both reduce congestion and raise substantial funds. Our estimates suggested that even a ₹15 toll on the 10 km stretch at peak could yield on the order of ₹100–200 Cr annually. Similarly, rationalizing on-street parking (currently underpriced) to Delhi/Mumbai levels could add tens of crores. We noted, however, that public transit improvements and rebates for low-income users would be needed to gain acceptance.

Land Value Capture (LVC): We found that new infrastructure (metro lines, roads) is already boosting land prices, especially on the OMR corridor and around proposed metro stations. By implementing tools like increased Floor-Area-Ratio (FAR) in these zones, or levying development impact fees, the city could capture some of the windfall gains. For instance, a modest FAR bonus on a few large plots near Metro Phase-II stations might raise ₹400–700 Cr, based on comparable projects. We observed that Tamil Nadu has begun experimenting with metro-linked levies, but our proposal outlined a transparent LVC framework to channel private land-value gains into public coffers.

Municipal (Green) Bonds: We identified green bonds as a way to raise large upfront capital at low interest, on the strength of Chennai's strong credit rating (Moody's Aaa). Examples show that Indian cities have successfully issued bonds for specific projects. Aligning with RBI recommendations, we proposed issuing a ₹300 Cr green bond for, say, a city-wide smart metering rollout or stormwater drains. This could be repaid over time from the utility savings or earmarked tax revenues. According to RBI analysis, many municipalities (including in Tamil Nadu) are now exploring such bonds, as they offer sizable funding for climate-resilient infrastructure.

Asset Monetization and Advertising: Chennai Corporation owns valuable assets (land parcels, street furniture, bus shelters). Converting these into revenue streams could be significant. For example, by auctioning naming rights or ad contracts on public properties (e.g. prime bus stands, new flyovers), the city could secure steady annual fees. We noted recent Chennai tenders (bus-shelter ads, lamp-post ads) expected to raise on the order of hundreds of crores if fully implemented. We recommended pilots like a PPP for digital ads on Anna Salai light poles or selling **corporate naming rights for a public park**.

User Charge Reforms: In line with RBI guidance, we emphasized rationalizing fees for basic services. Currently, Chennai's water and sanitation charges are frozen or low. Introducing volumetric water pricing and a small sewer/waste charge could both improve equity and add revenue. For instance, a tiered water tariff (with a free lifeline slab) and a ₹50–100/month waste fee could together yield tens of crores annually. [According to RBI, municipal property taxes, water charges, and other user fees remain grossly under-recovered].

We suggested initial pilots in a dense ward (e.g. T. Nagar) with strong public outreach to demonstrate the service improvements that accompany higher fees.

Other Tools: We also examined ideas like environmental levies (e.g. a plastic waste cess), civic crowdfunding for local projects, and stricter enforcement fines (illegal parking, pollution penalties). Each of these had smaller yield individually, but could supplement the major reforms and build civic ownership.

Overall, our analysis found that no single measure is a silver bullet. Instead, a portfolio approach could mobilize hundreds to thousands of crores over time. For example, a modest congestion charge plus parking fee reform and an LVC pilot together could outstrip the gains from traditional property tax reform alone. We presented a summary matrix comparing tools on revenue potential, political feasibility, and legal complexity. This showed that high-yield options like congestion pricing carry high political risk, whereas measures like asset monetization or naming rights are easier to implement but yield modest streams. The paper emphasized that pairing reforms (e.g. using toll revenues to subsidize bus improvements) and transparent communication would be essential for success.

Presentation to Advisors and Feedback Received: Upon completing the draft, I presented the research to my academic advisors and internship supervisors. They praised the paper's comprehensive scope and its grounding in both local data and international examples. The feedback stressed clarifying assumptions (e.g. traffic diversion effects from tolls) and highlighting equity safeguards. For instance, one advisor suggested framing congestion pricing revenues explicitly as funding for expanded bus and metro service, to ensure social buy-in. Others recommended strengthening the section on institutional reforms needed – such as recommending how the municipal finance department could build capacity for bond issuance or digital tax collection. Overall, the advisors encouraged us to publish these findings and to pursue small-scale pilots with the city government. The constructive critique helped refine the final report's recommendations and policy implications.

5. Field Exposure

5.1 Reflection on the CDS Field Visit

The Centre for Development Studies (CDS), Thiruvananthapuram, was visited during my internship at the Kerala State Finance Commission to experience academic research in development economics. The aim was to observe at first hand how serious research feeds into policy. CDS clearly positions itself as "a premier Social Science research institute" with the primary aim of "promoting research, teaching and training in disciplines relevant to development". This was exactly what our visit was intended to do: bridge

5.2 Activities during the visit

Faculty interactions: We had several meetings with CDS faculty (I remember Prof. Vinoj Abraham and a few others) and administrative personnel, although I do not know all their names. During these sessions, professors described the subject of their research. For instance, one faculty member doing research on local self-government talked about the difficulty of researching Kerala's panchayats. Another spoke about projects dealing with fiscal issues. These discussions revealed the diversity of faculty interests, ranging from applied economic modeling to grassroots governance.

Overview of research topics: We were briefed on CDS's core research topics. CDS structures its work into themes such as Culture & Development, Decentralisation & Governance, Migration, Labour & Employment, Macroeconomic Performance, etc. We discussed issues such as fiscal decentralization (connected with the Decentralisation theme) and migration (which is a focus of a specialist unit) during our visit. For instance, one of the talks explained how funds from the centre flow to the local governments in Kerala and brushed against public finance in decentralisation. We also learned about how an Overseas Indian Affairs-supported migration unit at CDS researches Kerala's sizeable expat community (smacking of the "Migration" theme). These orientation lectures made me appreciate how policy issues relate to CDS's research agenda.

Local Self-Government Research Unit (RULSG): We visited the Research Unit on Local Self Governments, a CDS initiative established in 2005. As CDS observes, the unit was established "to facilitate research" on local government and connect research with training for local functionaries (through institutions such as the Kerala Institute of Local Administration). In the RULSG documents we were able to observe a massive accumulation of Kerala panchayat records: old and new budget statements, development plans, and municipal records. These documents tangibly demonstrated the information that research on local governance draws upon.

Administrative and library meetings: We also met with administrative officials (including the director and head office officials) and librarians. They discussed how CDS helps promote state policy through research. For example, they spoke of joint ventures with the Kerala state government (e.g. Kerala Institute of Local Administration) to train local leaders based on CDS's research findings. This revealed the support of institutions behind CDS's activities and how it relates to our activities at the Finance Commission.

5.3 Using the CDS Library

K. N. Raj Library facilities: A significant portion of the visit was an orientation to the K. N. Raj Library. The librarian showed us its collections. This library is "a foremost development studies research library" in India, with more than 150,000 titles spanning economics, sociology, demography, political science and others. We discovered that it also contains large government publications and statistical reports. For instance, the library contains the full runs of Indian census volumes and most government statistical series. In our guided instruction, I retrieved older Kerala budget documents and local government reports from the stacks to verify that those old files I witnessed in the archive were truly part of the library's holdings.

Databases and journals: The library personnel introduced us to its electronic collection. CDS offers access to principal data sets employed in development work via the Internet. Characteristically, the library subscribes to national databases such as the Annual Survey of Industries, Census, CMIE economic data, NSSO survey data, RBI financial statistics, etc. We also searched electronic journals on economics and development. Witnessing these tools in person revealed how CDS scholars collect evidence: for example, one faculty member described using NSSO consumption data to examine trends in poverty, and RBI data to analyze state finance.

5.4 Academic insights Gained

Local governance data challenges: One insight was becoming aware of data gaps at the local level. Faculty clarified that although national statistics (census or RBI data) are easily accessible, comprehensive information on municipal and panchayat budgets tends to be scattered or unpublished. We debated how this renders it hard to empirically assess certain development programs at the grass roots. This discussion made clear for me the value of collecting primary data for applied research: to research local self-government, researchers must sometimes assemble data themselves from archives such as those we visited.

Interdisciplinary character of development research: The range of subjects at CDS showed how interdisciplinary is the field of development economics. The holdings of the library included not only economics but sociology, history, demography and more. Similarly, our conversations intertwined economic analysis with political and social context. To discuss decentralization, we took into account both budget numbers and the social effects of empowering Gram Sabhas. Observing economists working with political scientists and historians (as one does frequently at CDS) revealed to me that successful development research frequently goes across academic disciplines.

Applied, policy-oriented focus: I observed that CDS puts a high priority on real-world policy applicability. For instance, the mere fact that the RULSG exists – specifically with the mandate of bridging research and training of local government officials – already indicates that projects are intended to assist government agencies. During one session, a professor presented us with a genuine survey in Kerala panchayats whose purpose was to guide a new scheme of decentralization. This highlighted the fact that research at CDS begins with practical policy questions. The "research for development" slogan is not a mere theory here; we witnessed research proposals and working papers motivated by the requirements of Kerala's economy and institutions.

5.5 Understanding Applied Research

The trip significantly enhanced my conceptualization of applied economic research. Observing CDS researchers in action bridged the gap between theory and practice for me. For instance, our discussions showed how ideas from my studies (such as fiscal federalism or economics of migration) are tested empirically. CDS's own characterization of itself as "known for its research in applied economics" held true: I saw how they applied data to test hypotheses regarding development. From accessing the library's databases and archives, I liked how economists approach a research project: beginning with an issue of policy concern, gathering pertinent data (e.g., Census or municipal finance reports), and subsequently applying analytical techniques. This made it clear to me that economic models are alive when used to explain actual data, and made me understand the value of evidence-based policy evaluation.

5.6 Impact on Future Interests

Lastly, the field visit had an impact on my scholarly interests and future studies. I was especially intrigued by the issues of fiscal decentralization and local administration after our discussions. The problems and issues raised (such as how to enhance data collection in panchayats) indicate fertile research areas. I now plan to incorporate such topics in my remaining coursework. Moreover, having worked with the library's economic and demographic data, I am motivated to develop stronger data-analysis skills.

6. Mentorship and Peer Learning

6.1 Collaboration with Co-interns

Studies indicate peer collaboration facilitates learning when individuals work together to find solutions. During our internship, co-interns broke into small study groups to decode intricate budget reports and annexures, often reviewing drafts and fine-tuning concepts in consensus. Our brainstorming sessions and group discussions allowed for a healthy sense of mutual respect, where all ideas were respected (as observed, "everyone's ideas and opinions are respected" in a peer-learning setting). This interaction assisted us in sharpening our comprehension of budget documents and information.

The varied educational and geographical backgrounds of fellow interns added depth to our analyses. For instance, economic students emphasized quantifiable points while public policy students facilitated contextual interpretation, reflecting that peer learning "exposes people to different perspectives".

Collaborating on research assignments had us all share the workload: one intern could work with Excel data while another wrote policy briefs. This collaboration allowed us to learn new software and techniques.

Group presentations and mock data sessions enhanced our skills in communication. Presenting our findings to one another strengthened our own knowledge, in keeping with evidence that instructing peers enhances learning.

By going through these experiences, I personally witnessed how productive teamwork helps to develop problem-solving capabilities and self-confidence. Like in most working environments, our intern group's collaboration transformed personal vulnerabilities to collective capabilities.

6.2 Mentorship and Advice

Good mentors "facilitate the development and growth of the intern" and provide access to organizational resources. Our mentors (such as Dr.Hari Kurup Sir, Dr. Nirmal Roy, and Dr.Bijni Ma'am) in the Finance Commission exemplified these traits. They organized our study by giving us increasingly sophisticated assignments, and gave us the policy and historical context necessary to grasp Kerala's financial systems. Consistent with best practices, they had high expectations and fostered inquiry and independent thought, similar to an on-the-job mentor who "gives the intern permission to ask questions...takes the intern aside to talk about a problem."

Fiscal policy guidance: Our mentors provided input into Kerala's distinct fiscal scenario. For example, they discussed how the local grants and the recommendations of the State Finance Commission integrate into the overall state budget, enabling us to connect theory with practice. Their advice typified the mentor as a bridge to institutional information.

Constructive criticism: Feedback sessions were essential on a regular basis. We shared preliminary analyses and got tips on clarity, organization, and pertinence. This fits with the dictum that effective mentors "provide positive feedback when the intern does a task correctly". Through their feedback, I also picked up the skills to present policy insights crisply and base claims on facts.

Bridging theory and practice: The mentors tended to use their work experiences. By equating theoretical models with actual cases (e.g. decisions about allocating budget), they grounded learning in reality. Along the way, they were role models and helped us think more widely about careers in public finance, upholding the stance that mentors "see the intern as capable" and foster development.

Generally, mentor support was priceless. Their continued availability and encouragement (e.g. reminding us "there are no stupid questions") assisted in overcoming initial uncertainty. They encouraged us to think independently and creatively, which lifted my confidence in tackling new policy work.

6.3 Technical and Communication Challenges

One obvious challenge was working with data and reports in novel forms. We frequently had issues with Excel spreadsheets and annexures that were poorly documented. This mirrored an overall problem observed by observers: a lot of state agencies "have no complete system of gathering, collating and tracking PRIs finances". For instance, missing records or variable units in datasets forced us to manually cross-check figures or query mentors. These experiences instilled in me patience and carefulness in dealing with data.

Deciphering finance-speak: The terminology used in finance commissions and policy reports was thick. Initially, I was also confused by terms such as "devolution fund" and "untied grants." Through conversations with colleagues and mentors, I was able to decipher technical vocabularies and government abbreviations, enhancing my policy literacy.

Team coordination: There were times when we had to compile data from two or more departments. Scheduling and coordinating inputs were a test of my communication and time-management skills. We learned to prepare agendas and exchange notes on time, which developed our teamwork working habits.

Time management: Getting both daily data tasks and the bigger deadlines for reports in balance was challenging. To adjust, I began prioritizing with to-do lists and weekly objectives. This lesson helped me become a better planner and learn how to realistically estimate effort on research work.

In spite of these setbacks, each problem resulted in the development of skills. For example, dealing with a huge dataset compelled me to master Excel functions and data-validation methods ad hoc. Figure out lost budget entries turned into a mystery that made me develop problem-solving skills. Again, rewrites and rewriting parts of the report made me a better communicator. Overall, struggling with technical challenges and intricate coordination eventually developed soft skills such as adaptability and effective communication

7. Key Learnings and Takeaways

7.1 Understanding Public Financial Systems

My experience at the Finance Commission debunked most abstractions of public finance. For instance, I discovered fiscal decentralization: constitutional provisions (Articles 243I and 243Y) require State Finance Commissions to recommend how state resources and taxing powers are to be distributed to local bodies. Practically, it involves studying how much of Kerala's revenue can be devolved to Panchayats for local development. It is proven through research that most states are still "reluctant to devolve powers" to the core, and this explains why we observed some resistance or slow pace in financial reforms throughout the internship.

Devolution of funds: We closely examined Kerala's model. Kerala has been at the forefront of decentralization. As the state's economic review points out, Kerala initiated famously the People's Plan Campaign in the 1990s, decentralizing planning powers and budgets to villages. Our experience with budget data demonstrated how Finance Commissions carry this further by providing "General Purpose," "Maintenance," and "Development" funds to local governments. These headings (general, road maintenance, development plans, etc.) were unfamiliar to me until I looked at actual allotment tables.

Institutional problems: We saw typical problems in actual governance. In line with research, we also faced data gaps: official reports mentioned lack of full PRI (local government) financial databases, and at the office we observed incomplete records for some villages. Coordination issues also emerged, like inter-departmental approval delays. These experiences revealed what researchers refer to as "administrative bottlenecks" – like we needed to mark missing information in files, which hindered analysis and is a recognized barrier in fiscal decentralization.

Evidence of devolution rankings: A recent evaluation rated Kerala highly in terms of Panchayat devolution. In fact, our mentors frequently said that Kerala outsources most functions and has a transparent system of transfers. Witnessing it firsthand – e.g., local tax statistics and schedules for grant disbursements – made abstract concepts real. It highlighted the fact that good frameworks ("Framework" index) and accountability are the drivers of good local finance.

These observations affirm that governmental financial systems are premised on rules as well as implementation. I now realize that being knowledgeable about finance is not simply a matter of numbers: it involves comprehension of constitutional directives, planning procedures, and ground realities. Watching money circulate through the Panchayat system (and getting stuck) has provided me with a realistic perspective of how economic policies trickle down to communities

7.2 Personal and Skill Development

Looking back on my own development, the internship was worth it for developing technical as well as soft skills. Research highlights that internships "improve technical competence" and establish skills such as communication and problem-solving, which was my experience. Writing real policy documents made me improve my writing skills – I was able to present reports clearly and summarize lengthy information in a logical form. Finding background information enhanced my skill at quickly gathering and analyzing evidence.

Writing and research: Writing sections of the final report made me accurate and audience-sensitive. I mastered citing policy sources and providing statistics in conjunction with narrative. Comments from mentors enhanced accuracy and brevity.

Data handling: Frequent practice with Excel and statistics programs developed my comfort level with large data sets. I learned to use pivot tables and simple macros to sort budget numbers. This was not covered in my class work, so the internship provided me with a hands-on advantage in data competencies.

Teamwork and communication: Reporting to our mentors and colleagues made me a better public speaker and question-answerer. Collaborative work on a daily basis also honed my listening skills and instilled in me such habits as briefly summarizing points of discussion in writing. Consistent with research, I learned that peer explanation – explaining an idea to another intern – solidified my grasp of it.

Career aspirations: Notably, this internship impacted my career aspirations. Prior to that, I was unsure about policy versus academic work. Today, I am interested in state-level economic research and public finance. Having worked on analyzing Kerala's budgets, and observed how research can influence policy, I am now leaning toward graduate school or a career working in fiscal policy analysis.

Overall, the internship significantly increased my skill set and defined my objectives. I depart with more robust research skills, improved teamwork skills, and a clearer understanding that I desire to engage in work that intersects economics and governance.

8. Conclusion

This month-long internship provided essential learnings regarding the intersection of practice and policy. I saw firsthand how constitutional concepts (e.g. fiscal decentralization) operate in Kerala's government, learning more about public finance than from textbooks. Mentors and co-interns facilitated transforming theoretical concepts into practical analyses, illustrating that actual policy practice is iterative and collaborative. For instance, observing how the Centre for Development Studies (a leading economics research center in Kerala) connects academic analysis with government policy decisions further entrenched the importance of evidence-based policy.

In general, the experience influenced my worldview about public policy: theory is important, but observing data-infused policy debates at a Finance Commission underscored the significance of on-the-ground realities. I have grown interested in pursuing further studies of state-level financial problems, local government, and economic planning. The practical exposure to bodies such as the State Finance Commission – and exposure to scholars at CDS – proved particularly enriching. It revealed to me how theoretical knowledge must relate to governance problems.

I thank my mentors and peers for their guidance and support. Their inspiration and the responsibilities entrusted to me have instilled in me the confidence to explore further research in public economics. In the future, I look forward to extending this foundation, perhaps in subsequent projects on Panchayat planning or on decentralized finance studies. This internship has been a motivating step in that direction.

ANNEXURE

1. Code used for Data Cleaning (in R Programming and Python)

Pivot Dataframe Code

R:

```
library(dplyr)
```

```
library(tidyr)
```

```
# Assuming your data is loaded into a data frame called df
```

```
df <- read.csv("\\Users\\mehul\\Downloads\\trial_sheet - Sheet1.csv")
```

```
pivot_df <- df %>%
```

```
  group_by(chvEngLBName, vchaccounthead) %>%
```

```
  summarise(Amount = sum(Amount, na.rm = TRUE), .groups = "drop")
```

```
%>%
```

```
  pivot_wider(
```

```
    names_from = vchaccounthead,
```

```
    values_from = Amount
```

```
)
```

Python:

```
import pandas as pd
```

```
df= pd.read_csv('trial.csv') [for csv files] / df= pd.read_excel('trial.xlsx')
```

```
[for excel files]
```

```
pivot_df = df.pivot_table(
```

```
  index='chvEngLBName',      # Gram Panchayat names
```

```
  columns='vchaccounthead',  # Account head becomes columns
```

```
  values='Amount',          # Values to fill in cells
```

```
  aggfunc='sum',            # If multiple entries exist, sum them
```

```
  fill_value=None           # Keep missing values as NaN
```

```
)
```

2. LSG (Local Self government) Names with their Codes - Used for Data cleaning purposes

These codes were given to us by our guides , With these codes - we were able to give structure to the raw data given by the kerala state finance commission , which had malayalam names , So Using this excel formula - =VLOOKUP(C2,\$J\$8:K3889,2,FALSE) we were able to convert the raw data into standardised format in a appropriate structure recommended by the commission

Code	Name of LSG	Code	Name of LSG	Code	Name of LSG
G010101	Chemmaruthy	G050708	Manarkadu	G091103	Elavanchery
G010102	Edava	G050801	Ayarkunnam	G091104	Pallassana
G010103	Elakamon	G050802	Puthuppally	G091105	Melarkode
G010104	Manambur	G050803	Pampady	G091106	Nenmara
